

The ability to Think On Your Feet = Greater Success

Top companies know that the ability to make smart decisions and gain knowledge on the job enhances performance significantly.

Professional Learning Indicator™ is an indicator of trainability, in the sense that it discloses your employees' capability of absorbing new knowledge. A person's cognitive abilities are a direct indicator of that individual's on-the-job performance and ability to acquire job knowledge. By measuring cognitive abilities you will know if an individual is able to obtain job knowledge on a high level and at a rapid pace, identifying employees with a high probability of performing excellently.

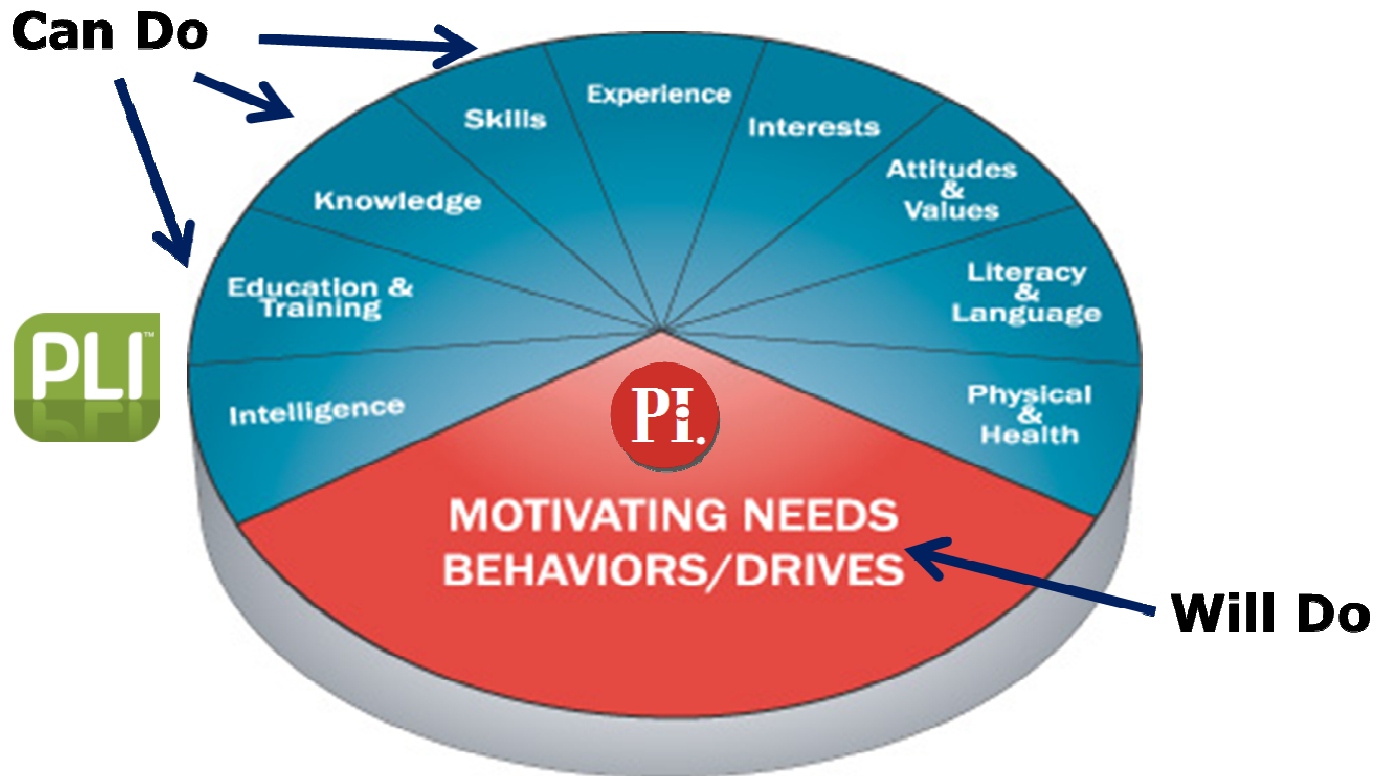

- Relevant for both entry and advanced positions
- Dynamic, web-based tool!
- Scientifically validated management tool!
- Based on the most up to date science, with many years practical experience
- Unbiased—measures cognitive abilities not IQ
- Available in 31 languages, including French
- Proven in Denmark, now available in Canada!
- Created by Valtera Corporation, one of the world's leading test system developers

Professional Learning Indicator™ + Predictive Index® = Unparalleled Insight

Predictive Success™ is the proud partner and official Canadian licensee of the **Professional Learning Indicator™**

Professional Learning Indicator™ produces the cognitive picture of an individual's set of competences and is thus highly combinable with quality normative psychometric systems (personality profiles). Personality profiles such as the Predictive Index® measure the work-related needs and motivational drives of an individual. Combining personality and logical assessment gives an unparalleled insight into a current staff's or a candidate's potential for success in any given position. Some psychologists believe the two assessments in combination account for up to 40-60% of an individual's predicted job performance.

To learn more about the Predictive Index® System, or the Professional Learning Indicator™, contact us at:
