

SAFE BEHAVIOUR ANALYTICS

Predictive Success Academy Leadership Series

1 DAY VIRTUAL

Pricing available on request

Your employees produce goods and services for your clients, are the promoters of your brand, and the managers of your operations. Business success is clearly dependent on the quality and wellbeing of your workforce. Not only do employee injuries or illness affect their ability to work and maintain their livelihood, the toll on co-workers, families and communities can be equally devastating. Don't take chances with safety. Use people data to predict risk and develop a risk adverse culture in your organization. Protect your people, protect your business.

This full-day session offers participants a better understanding of what drives safe and predictable human behaviour. The session explores the motivations that influence safety decisions and how to coach employees to be self aware if they do not exhibit the ideal safe behavioural pattern. Sessions are led by consultants who are experts in the discipline, in an accessible, easy-to-digest format. Participants will leave the session with the skills to identify what causes unsafe workplace behaviour and pinpoint individuals who are hardwired to make risky decisions, while leveraging self-awareness with existing employees to improve safety.

“With so much at stake, it's important to use a scientific tool such as the PI Behavioural Assessment to provide objective data to get at the root cause of your safety challenges.

-Trevor Bent, VP HR & Safety, Eassons Transport Ltd.

100% of attendees rated the virtual training a 5/5 when asked if they believe they are better equipped to champion safety in their organization.
